

Precautionary Statement

Care must be taken when handling strong acids. Protect your eyes and skin from the contents of this container by wearing gloves and splash proof eye wear.

Tightly reseal and store the container away from children, light, cold and heat. Wash hands after use.

In case of a spill, neutralize with weak acid (acetic), and place in closed container for disposal. Flush spill area with water. If this product is splashed into eyes or skin, rinse with water for 15 minutes and call a physician.

**pH
UP**

CONCENTRATE

Formulated for
constant feed nutrient programs.

Active Ingredients:
Potassium Hydroxide, Vitamins.

General Directions:

Check the pH of the water or nutrient solution. If the pH needs to go up, follow the mixing and application directions below.

Mixing Directions: Add 24 ounces of water to a sealable plastic quart container and then slowly pour in 8 ounces of pH UP Concentrate. For larger applications, add three quarts of water to a sealable gallon jug then add one quart of pH UP concentrate. Place the cap on the container and cautiously shake to mix. Label the container showing the ratio of pH UP concentrate to water.

Application Directions: Slowly pour small amounts of the diluted pH UP from the container into the water or nutrient solution needing pH adjustment. Allow time to mix. Once again check the pH of the water or nutrient solution. If the pH is too low, repeat the above steps.
